## Letter of Recommendation

This letter is to recognize a superb transportation company, Precision Heavy Haul (PHH). When the Large Binocular Telescope Observatory (LBTO) needed a company to move very heavy, oversized, one-of-a-kind pieces of their world-class telescope to its home on a 10,500-foot mountain, it was already aware of PHH and their capabilities. However, LBTO felt that a larger, more experienced company would be a better and more prudent choice. After researching and interviewing more than four of the country's largest transportation companies, we chose PHH.

PHH has proven to be the most reliable, conscientious, and safe transportation provider we could have asked for. Every employee of this company is dedicated to getting your job completed correctly. The requirements of the LBTO are unique and technically demanding. Some of the best scientists and engineers that the University of Arizona has to offer worked closely with the men and women of PHH to ensure that the telescope would be transported safely and on time to the mountain enclosure.

I strongly recommend PHH to anyone considering the need for an outside transportation contractor. PHH will always treat you and your needs on a personal team level.

Sincerely,

James H. Slagle, Ph.D.  
Assistant Director
